Measles/Mumps/Rubella/Varicella IGG (Order 559580433)

Measles/Mumps/Rubella/Varicella IGG

Order: 559580433

Status: Final result Visible to patient: Yes (seen) Next appt: None Dx: Pre-diabetes

Component	2/6/24 1101	2/15/22 0924	5/15/19 1454
Ref Range & Units			

Measles IgG (Rubeola) Ab	67.4	77.3 CM	51.9
AU/mL			

Measles IgG Interp	Positive	Positive CM	Positive CM
--------------------	----------	-------------	-------------

Comment: Positive (≥ 16.5 AU/mL): Presence of detectable IgG antibodies to measles virus. Positive result suggests past exposure to measles virus or previous vaccination.

Equivocal (13.5 - 16.4 AU/mL): Repeat testing in one to two weeks is recommended.

Negative (< 13.5 AU/mL): Absence of detectable IgG antibodies to measles virus.

Negative result suggests that the patient is susceptible to measles.

The magnitude of the measured result, above the cutoff, is not indicative of the amount of antibody present.

Varicella IgG Antibody	2856.0	2656.0	2015.0
Index			

Varicella IgG Interp	Positive	Positive CM	Positive CM
----------------------	----------	-------------	-------------

Comment: Positive (≥ 165.0 Index): Presence of detectable IgG antibodies to varicella-zoster virus. Positive result suggests exposure to the pathogen or administration of specific immunoglobulins.

Equivocal (135.0 - 164.9 Index): Repeat testing in one to two weeks is recommended.

Negative (< 135.0 Index): Absence of detectable IgG antibodies to varicella-zoster virus.

The magnitude of the measured result, above the cutoff, is not indicative of the amount of antibody present.

Performed at:

Northwell Health Laboratories

Mumps Ab Interp**Positive****Positive !**

R, CM

Positive CM

Comment: Positive (≥ 11.0 AU/mL): Presence of detectable IgG antibodies to mumps virus. Positive result suggests past exposure to mumps virus or previous vaccination.

Equivocal (9.0 - 10.9 AU/mL): Repeat testing in one to two weeks is recommended.

Negative (< 9.0 AU/mL): Absence of detectable IgG antibodies to mumps virus.

Negative result suggests that the patient is susceptible to mumps.

The magnitude of the measured result, above the cutoff, is not indicative of the amount of antibody present.

Rubella IgG Ab**6.0**

9.1

6.0 CM

Index

Rubella IgG Interp**Positive**

Positive CM

Positive CM

Comment: Positive (> 1.0 Index): Presence of detectable IgG antibodies to rubella virus. Positive result suggests past exposure to rubella virus or previous vaccination.

Equivocal (0.9 - 1.0 Index): Repeat testing in one to two weeks is recommended.

Negative (< 0.9 Index): Absence of detectable IgG antibodies to rubella virus.

Negative result presumes that immunity has not been acquired.

The magnitude of the measured result, above the cutoff, is not indicative of the amount of antibody present.
